Transform your data from a liability to an asset with the most innovative and accurate data governance platform.

WHAT IS DATHENA?

Using cutting edge machine learning technology Dathena sifts through all your data giving you full control. The platform is non-intrusive, easy to deploy and provides the following benefits:

Identify, classify and categorize data in any language: identify all files, assign a category and tag the relevant level of confidentiality based on document content and organization policies.

Protect your data: identify data ownership, apply records retention schedules and get alerts.

Monitor, track and control: detect abnormal document labelling, data repository access rights, storage location and suggest Data Loss Prevention policies.

Dathena fits perfectly in your existing environment. The platform has been built to collect, analyze and share data to and from multiple sources such as: Avaloq, Temenos, Oracle Financial Services, SAP, Salesforce, Active Directory, Nextthink and many more.

WHY IS DATHENA UNIQUE?

Dathena is the only data governance platform using cutting edge machine learning and artificial intelligence capabilities.

Dathena classifies data with an unprecedented 96.1% accuracy level without any supervision. When semi-supervised, Dathena's classification results reach 99.9% accuracy level.

Dathena is an agnostic technology that works in any environment and, is the first and only data governance platform developed by users for users.

Dathena comes with out-of-the-box regulatory controls which, for example, help financial institutions to be compliant with EU GDPR, FINMA, HKMA and MAS TRM guidelines.
